

ALLEN FIRTH [.NET ARCHITECT / DEVELOPER]

WWW.ALLENFIRTH.INFO / +44 (0)78 1464 5270 / ALLEN.FIRTH@GMAIL.COM

SUMMARY

I have over 12 years of experience in software development and am highly skilled in Microsoft technologies, patterns, practices and tools. I have extensive experience in object orientated architecture and design, systems design and development and coding practices specifically test driven development, agile and XP approaches.

I have been working as a developer and technical architect actively using C# and ASP.NET as well SQL Server for the last ten years. I am interested in **DDD**, **CQRS**, **event sourcing**, service orientated architecture and messaging.

I have been exposed to varied industries and sectors as well as to all aspects of the software development lifecycle from conception of the software project idea, through analysis, design and implementation and finally, maintenance and support of the final product.

SKILL SET

CORE SKILLS	Visual Studio 2013, .NET 4.5, C#, ASP.NET [MVC] / WebAPI, jQuery, X/HTML5, CSS, Microsoft Sql Server, Oracle, SVN
METHODOLOGIES ARCHITECTURES	Test Driven Development (TDD), XP , Agile , Service Orientated Architecture (SOA), Event Driven Architecture (EDA), Command & Query Responsibility Segregation (CQRS), Domain Driven Design (DDD), Aspect Orientated Programming (AOP)
OTHER	WPF, NServiceBus , Microsoft Message Queue (MSMQ), WCF , NHibernate , Fluent NHibernate, CC.NET & Team City (Continuous Integration Servers), Spring.NET StructureMap Autofac Castle Windsor (IoC/DI frameworks), Resharper , NAnt , MSBuild, WIX (Windows Installer XML), FXCop, Ncover, NUnit, Rhino Mocks , Moq, TestDriven.NET , TFS, Subversion (SVN), Octopus Deploy, Nuget, Quartz.NET
INTERESTS	F# , Git & Mercurial Distributed source control systems, Behavioural Driven Design (BDD), RavenDB & other NoSQL databases. Client side javascript frameworks such as AngularJS & Knockout. Node.js

I have excellent written, verbal communication and problem-solving skills. I am also confident speaking in front of crowds of any size. I have also lead small teams of developers and operated in a mentor role to junior developers.

EDUCATION / CERTIFICATION

2003	Bachelors of Commerce (Informatics), UNISA (University of South Africa)
2000	Microsoft Certified Solutions Developer (MCSD) / Microsoft Certified Professional (MCP)

EXPERIENCE / EMPLOYMENT

SOFTWARE CONSULTANCY – FEB 2011 – CURRENT: DIGITERRE, LONDON (CONTRACT)

I worked primarily as the team lead on a large project for [EON Energy](#) developing a Transfer Pricing management tool. The project team was spread over London, Dusseldorf and India and required strong coordination and communication to keep the project on track. In the last two years we have brought this project to completion and are now in the process of handing it over for support and maintenance to an outsourced provider chosen by EON.

The solution we provided made use of Oracle, server side service components and a WPF user interface. The system worked on large sets of data output by models and involved a series of calculations and data manipulation in order to output the required reports and data analysis required by the business.

Technologies & Methodologies used: Visual Studio 2013, C#, Oracle 11g, NHibernate, FluentNHibernate, NUnit, RhinoMocks, NAnt/MSBuild, DBDeploy.NET, WPF, Telerik, TeamCity, SVN

Earlier in my work with Digiterre I also worked on an asset management system for [Royal London Asset Management](#) and also a short stint on a project for [Deutsche Bank](#).

HEDGE FUND - JUL 2010 – FEB 2011: MAN INVESTMENTS, LONDON (CONTRACT)

I worked as part of a geographically distributed team working on systems integration of multiple disparate applications in the middle office of the worlds largest Fund of funds. Our development team facilitated systems communication between various data sources and applications using a variety of request/response and publish/subscribe messaging solutions built on Oracle weblogic / MSMQ and a custom in-house messaging bus.

The team used SCRUM to run and manage month long sprints. SCRUM teams were located in different offices and communication was paramount to successfully completing work. Part of the teams mandate was to introduce in increasing measures the principles of Agile development, increase the test coverage of the code base and strongly push the ethos of TDD.

I worked on various different systems including middle office fund accounting, Fee calculation, Foreign Exchange and Trade planning.

Technologies & Methodologies used: Visual Studio 2010, C#, Sql Server 2005, Oracle 10g, NHibernate, NUnit, Rhino.Mocks, TestDriven.Net, NAnt scripts, Cruise Control, Hudson, Resharper, MSMQ/Oracle Weblogic, Log4Net for logging.

INSURANCE - FEB 2010 – JUN 2010: BRITINSURANCE, LONDON (CONTRACT)

I worked in a team of eight developing an online system enabling [BritInsurance](#) to manage insurance sold through their network of brokers. The system was loosely coupled employing a publish/subscribe messaging model implemented with **NServiceBus** to achieve decoupling of logically separate components, high availability and reduce dependencies on other systems.

The team worked in an agile fashion using a continuous integration environment (**Team City**) alongside unit and integration testing and automated deployment to provide timely feedback to developers on the health of the codebase as a whole. A Kanban board was used to monitor and manage the project's progress and the team operated in a self-managing style with emphasis on distribution of system knowledge amongst the whole team and each member taking responsibility for the whole system.

Technologies used: C#, ASP.Net MVC, jQuery, JSON, NServiceBus, WCF, CQRS, DDD, EDA, NUnit, Moq, Castle Windsor

LAW - MAY 2008 – JAN 2010: [FRESHFIELDS BRUCKHAUS DERINGER, LONDON \(CONTRACT\)](#)

I joined a team of 7 in building an internal budgeting and forecasting web application developed using **ASP.NET (C#)**, **Ajax 1.0**, **WCF** and **NHibernate** with **Sql Server 2005**. The team worked in a highly **agile** fashion with strong emphasis on **test-driven design (TDD)**, bi-weekly development iterations and daily project stand-ups. The application was loosely coupled, incorporating MSMQ and WCF to communicate with different components in a **Service Orientated Architecture**. The team used SVN, CruiseControl.NET, NAnt scripts, NUnit, Rhino Mocks, NCover, Fxcop and Wix to create a continuous integration environment with automated deployment to various environments.

I also worked on a green fields contact & event management system developed with **ASP.NET MVC 1.0**, **jQuery/Ajax**, **WCF** and **NHibernate** with **Sql Server 2005**.

A more comprehensive list of my experience dating back to 2000 can be viewed on my website – allenfirth.info
